

Freie Software braucht euch

Ohne Community keine Freiheit

Projekt starten

Handwerkszeug:

- Zentrale Anlaufstelle (Website)
 - Wiki
- SourceForge.net
- Freshmeat
- Mailingliste
- Aufgabenverteilung
 - Core Team
 - Dokumentation
 - Artwork
 - ...

Projekt starten

Handwerkszeug:

- Zugriff auf Source Code (CVS, SVN, ...)
- Binaries!!
 - Debian, Ubuntu, Mandrake, Suse, Fedora, Windows, ...

Projekt starten

Release early, release often!

- keine Angst vor frühen Betas
- flexibel auf Wünsche reagieren
- „Mit einer genügend großen Basis an Beta-Testern und Co-Entwicklern wird jedes Problem schnell erkannt und beseitigt“ (ESRs „Linus‘ Law“)
- **aber:** immer Ziel vor Augen

Warum Community?

Weite Verbreitung, Klasse mit Masse:

- mehr Entwickler
- mehr Anwender
- mehr Feedback
- mehr Features (die vorher evtl. gar nicht geplant waren)

=> mehr Qualität

Public Relations

Alle sollen es wissen

- Pressemitteilungen
- Blog(s)
- News auf Homepage
- Newsticker: Pro-Linux.de,
Linux-Community.de

Public Relations

Alle sollen es wissen

- häufige Probleme:
 - kein Ansprechpartner
 - zu wenig Infos

Kommunikation

Alle sollen es wissen

- Events (CeBIT, LinuxTag, Chemnitzer Linuxtage, ...)
- direkte Kommunikation mit Entwicklern (auch untereinander)
- Kontakt zu Neulingen, potenziellen Benutzern

Was passiert bei Fehlern?

Community ist sehr sensibel

- schlechte Kommunikation
- Barrieren (CVS-Zugang, ...)
- keine Einbindung
- langsame Entwicklung

**=> Missmut
im schlimmsten Fall: Fork**

- Beispiele:
 - OpenWRT => FreeWRT
 - Mutt => MuttNG
 - XFree86 => X.org

Mitmachen

„Ich kann/will nicht programmieren“

=> es gibt für dich viel zu tun

- Marketing, PR
- Dokumentation
- Übersetzung
- Webdesign
- Support (Foren, Mailinglisten, ...)
- Artwork
- Usability

Mitmachen

Marketing, PR

- Kommunikation mit Usern
- Schreiben von Artikeln, News
- Kontakt zu Redaktionen
- Vorträge

Mitmachen

Dokumentation

- viele Projekte pflegen schlechte Doku
- gute Dokumentation hilft beim Einstieg (API-Spec., Tutorials)

Summer of Code 2006
May 1st, 2006 - 2:41PM PDT

Google is now accepting applications for its 2006 [Summer of Code](#). Gaim is a mentor again this summer, so take a look at some our suggested [projects](#), and consider applying today!

Beta 3: What goes up must fall down?
March 29th, 2006 - 1:27PM EST

Great day in the park, we've released Gaim 2.0.0 beta 3. You know the drill--you can find [assorted builds on our sourceforge page](#). We'd like to note that none of the beta 3 RPMs include a Gadu-Gadu protocol plugin. So if you need Gadu-Gadu then you should stick with beta 2. And as my pappy always used to say: don't hitch your wagon to a stump if it has eyes. We never did know what he was talking about.

^ Update - April 4th, 2006 - 7:10PM CST ^

Known bug: On Windows, timestamps are wrong in the log viewer. They're improperly offset depending on your timezone. This bug is purely a display issue. The logs are still tagged correctly, so in the next release, everything will display properly.

Beta 2: The Sequel to Beta
January 24th, 2006 - 5:08PM EST
