Samsung R&D Institute Poland

Agenda

1. Introduction
2. Laboratory setup
3. Tools
4. Demo
5. Next steps
6. Conclusion

Introduction

What is LAVA?

- Linaro Automated Validation Architecture
- Automation system for deploying operating systems
- Supports both physical and virtual hardware
- Allows running boot, bootloader and system level tests (extra hardware may be required)

When is it needed? (Single target)

When is it needed? (Single instance)

When is it needed? (Multiple targets)

When is it needed? (New architecture)

When is it needed? (Multiple instances)

When is it needed? (Abstraction layer)

What are LAVA use cases?

- Complex device management
- Resource allocation (various capabilities)
- Scheduling and dispatching tasks on numerous devices

How does it help?

- Provides unified device environment
- Allows test execution parallelization
- Collects and tracks results over time
- Supports direct device access
 - **Hacking Sessions**
 - **Board Overseer**

Kernel CI

Laboratory setup

Where to start?

- **Standalone instance**
- **Virtual devices only**
- **Simple tests (health checks)**

- **Reduce initial complexity**
- **Familiarize with the new workflow**
- **Understand LAVA concepts**
- **Postpone learning how to write tests**

Machine with supported Debian release (Ubuntu support **frozen**)

| Distribution | Codename | Number | Support |
|--------------|--------------------|--------|--------------------|
| Debian | experimental | n/a | Yes ^[1] |
| Debian | Sid (unstable) | n/a | Yes |
| Debian | Buster (testing) | n/a | Yes ^[4] |
| Debian | Stretch (stable) | 9.0 | Yes ^[2] |
| Debian | Jessie (oldstable) | 8.0 | Yes ^[3] |

Necessary files

- System image
- Health check job
- Device type template
- Device dictionary (instance definition):

```
{% extends 'qemu.jinja2' %}  
{% set mac_addr = '52:54:00:12:34:AB' %}  
{% set memory = '1024' %}
```

Step #1: Database & metapackage

```
# apt install postgresql  
# apt install lava
```

Step #2: Enable access via web UI

```
# a2dissite 000-default.conf
# a2enmod proxy
# a2enmod proxy_http
# a2ensite lava-server.conf
# service apache2 restart
```

Step #3: Add main laboratory operator

```
# lava-server manage createsuperuser
```

Step #4: Add devices to LAVA laboratory

```
# lava-server manage add-device-type qemu
# lava-server manage add-device
  --device-type qemu qemu01
# lava-server manage device-dictionary
  --hostname qemu01 --import qemu01.dict
```

CLI

```
$ lava-tool submit-job --help
```

Web UI

Submit Job

You can use the [Job Submission Wizard GUI](#) for submitting jobs (used for deprecated V1 only).

Otherwise, paste your job definition here. Alternatively, you can paste a URL to your job definition file.

| | |
|---|-------------------------------------------------------------|
| 1 | Enter your job definition or link to a job definition here. |
| 2 | |
| 3 | |
| 4 | |
| 5 | |
| 6 | |
| 7 | |
| 8 | |

Add to my favorite jobs

Validate

Submit

Tools

- Environment reproducibility
- Same on staging and production environment
- Choose personal favourite
- LAVA laboratory roles available

- New machines brought up instantly
- Wide range of prebuilt boxes (careful!)

- Flexible (covers various use cases)
- User-friendly CLI/GUI tools

Demo

| | |
|--------------|-----------------|
| LAVA | metapackage |
| Device | QEMU |
| VM provider | Vagrant Libvirt |
| Provisioning | Ansible |

Configuration example

Next steps

- **Adding new device types to LAVA**

`https://validation.linaro.org/static/docs/v2/first-devices.html#adding-new-device-types`

- **Writing tests**

`https://validation.linaro.org/static/docs/v2/developing-tests.html`

- **Add your lab to Kernel CI**

`https://github.com/kernelci/lava-ci#add-your-lab-to-kernelci`

- **AGL Testframework setup instructions**

<https://wiki.automotivelinux.org/agl-testframework/setup>

- **Civil Infrastructure Platform Testing initiative**

[https://](https://wiki.linuxfoundation.org/civilinfrastructureplatform/ciptesting)

wiki.linuxfoundation.org/civilinfrastructureplatform/ciptesting

- Getting Started in LAVA V2 – Bill Fletcher ([LAS16-TR05](#))
- Building a Boards Farm: Continuous Integration and Remote Control – Antoine Tenart & Quentin Schulz ([ELCE 2016](#))
- Testing with volcanoes - Fuego+LAVA – Jan-Simon Möller ([ELC 2017](#))

- **Comprehensive documentation**

<https://validation.linaro.org/static/docs/v2>

- **Lava-users mailing list**

<https://lists.linaro.org/mailman/listinfo/lava-users>

- **#linaro-lava on Freenode**

<http://webchat.freenode.net/?channels=linaro-lava>

Conclusion

- Easy installation thanks to package repositories
- Instant setup (once all requirements are met)
- Environment unification for various device types
- No cost test execution parallelization
- Responsibilities division (farm maintained by its operators)

Final thoughts

- Exhaustive documentation has no downsides
- No need to reinvent the wheel in board farm management
- Automation always pays off in the long term

Questions?

Thank you!
